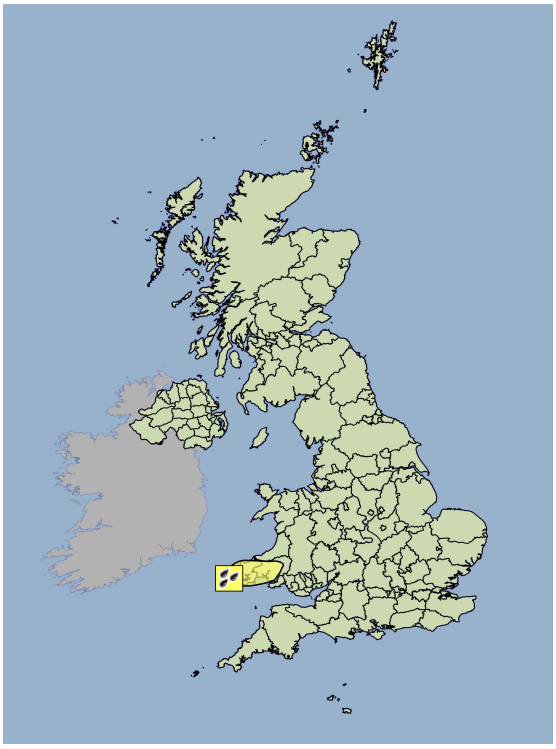
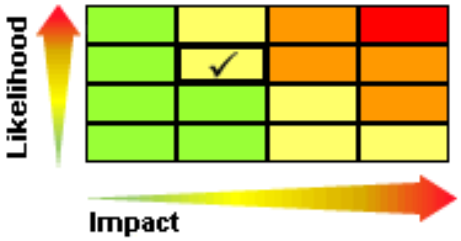
National Severe Weather Warning Service





Chief Forecasters Assessment
Heavy, possibly thundery, showers will develop later this afternoon and then last into Friday night and the early part of Saturday morning. The showers may become aligned in the flow across parts of southwest Wales to bring more persistent spells of heavy rain lasting an hour or more. After the recent wet weather the ground is now saturated and where these more prolonged heavy showers occur there is an increased risk of surface water flooding.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **16:00 on Fri, 14th Nov 2014** until **06:00 on Sat, 15th Nov 2014**

Heavy showers, some thundery, will develop later this afternoon and then last through Friday night and into the early part of Saturday morning. This additional rainfall, following the recent wet weather, means that there is a risk of local surface water flooding.

The public should be aware of the risk of localised disruption due to flooding.
